Remote, Germany

 Mitarbeitende können remote arbeiten

Full-time

Job Field: Engineering, Technology and Tools

Candidate Location: Germany

Hire type: Full time

Company description

Working at The Adaptavist Group:

The [Adaptavist Group](#) is a global family of companies with a shared purpose: We combine the best of teamwork, technology, and processes to help businesses of all kinds become better today and tomorrow.

We are experts in delivering enterprise software, custom solutions, and high-quality services within some of the world's most trusted technology ecosystems, including Atlassian, AWS, Slack, GitLab, [monday.com](#), and Aha!

We make change happen—from anywhere.

Job description

The QA/Test Automation Engineer position will work with customers to help them ensure the highest quality and reliability of their software products, including designing, implementing, and evolving automated testing frameworks using Selenium, as well as working with other modern testing and quality assurance tools. As part of our clients' partially outsourced teams, this position will assist their businesses acting as a remote QA expert on a day-to-day basis ensuring that we implement a world-class Software Quality Assurance best practices.

We are seeking a standard-level **QA / Test Automation Engineer** to join our internal engineering team. In this role, you will focus on building, executing, and maintaining automated test suites using Selenium. You will collaborate directly with internal developers and product teams to integrate automated testing seamlessly into our deployment pipelines.

What you'll be doing

- Automation Development: Write and maintain robust automated test scripts using Selenium
- Defect Tracking: Isolate, replicate, and document software bugs in tracking systems, providing detailed logs and reproduction steps
- Cover embedded software, backend/server applications, and system integrations
- Establish and continuously improve software quality processes, testing methodologies, and best practices across development teams.
- Define testing strategies across the full software development lifecycle, including requirements validation

- Define testing strategies across the full software development lifecycle, including requirements validation, unit testing, integration testing, system testing, and release testing
- Define guidelines and best practices for test case design, test coverage, traceability, and test documentation across teams.
- Drive test automation strategy and ensure automated testing is integrated into CI/CD pipelines.
- Familiar with the use of code generation tool for quality assurance and testing automation purposes.
- Define and improve defect management processes, root cause analysis processes, and continuous improvement loops.
- Define strategies for system testing environments, simulation environments, and hardware-in-the-loop testing where required.
- Ensure compliance with relevant quality standards, cybersecurity requirements, and software development processes.

Qualifikationen

Essential

- Proficient German and English language skills
- Proven and strong experience in software development, quality assurance, testing, or quality engineering, with experience in a leadership or coordination role
- Experience with software testing (Selenium)
- Experience defining and implementing software quality processes, testing strategies, and testing methodologies across multiple teams or products.
- Experience with test automation frameworks and integration of automated tests into CI/CD pipelines
- Experience working with CI/CD and DevOps environments (e.g., Azure DevOps, GitHub Actions, GitLab CI, Jenkins or similar)
- Experience in presenting solutions to customers based on provided requirements
- Experience writing and contributing to technical reports
- Proficient in code debugging and analyzing automation test results
- Excellent organizational, prioritization, communication, and interpersonal skills
- An ability to think innovatively and creatively
- Team player and strong collaboration skills
- Consume APIs with Postman
- Experience working in Agile or iterative development environments and collaborating with cross-functional teams.
- Self-starting, strongly ambitious, and tenacious

Zusätzliche Informationen

Du erfüllst nicht alles? Kein Problem! Studien zeigen, dass Frauen und People of Colour manchmal zögern, sich zu bewerben, wenn sie nicht alle Anforderungen erfüllen. Bei Adaptavist, Teil von TAG, setzen wir uns dafür ein, ein vielfältiges und einladendes Team aufzubauen.

Wenn Du Leidenschaft für diese Rolle mitbringst und bereit bist, mit uns zu lernen und zu wachsen, ermutigen wir Dich, Dich zu bewerben - auch wenn Du noch nicht alles mitbringst.

Schick uns Deine Bewerbung - wir freuen uns darauf, von Dir zu hören
