

ID 2026-6997 Job Category IT/Technology

Overview

About the Role & Team

IDC is building the next generation of AI-powered intelligence platforms that transform how technology decisions get made. Our platform re-imagines the way decision-makers discover and interact with trusted research and data, and is foundational to IDC's future.

We are seeking an Experienced QA Engineer to take primary responsibility for testing and ensuring the quality of our client-facing applications. Ensuring their reliability, performance, and user experience is vital — any malfunction or quality issue could directly impact customer satisfaction, trust, and our brand reputation. The role will include manual testing and the development of automated regression tests while using AI tools to ensure faster feedback cycles and more stable releases.

This person will work closely with developers and product management, ensuring tight alignment between requirements, delivery, and validation. If this position is not filled, it will significantly impact the customer experience, increase the risk of defects reaching production, and reduce the productivity of our development teams due to slower release cycles and lack of dedicated QA support for critical applications.

What You'll Do

- Daily manual testing of mentioned tools
- Plan regression testing and perform it
- Write UI automation tests (Java/Selenide, Typescript/Playwright)
- Manage test cases in Zephyr
- Summarize and document found bugs in JIRA
- Validate research data and provide feedback to the research team
- Communication with PM and business to clarify requirements and changes

What You Bring

Must Have

- 3+ years of experience in software testing
- Experience in manual and automated testing
- Experience in test automation frameworks (e.g., Selenium, Selenide, Playwright)
- Knowledge of programming languages for test automation (e.g., Python, Java, TypeScript)
- Knowledge of database querying (SQL)
- Willingness to experiment and incorporate AI tools into daily work to increase quality and efficiency

Nice to Have

- Familiarity with API testing, performance, security testing
- Understanding of CI/CD pipelines
- Experience with bug tracking and test management tools (e.g., Jira, TestRail)

Why This Role Stands Out

At IDC, your work helps shape how the world understands technology and where it goes next. You collaborate with curious, high-caliber colleagues who value rigor, integrity, and shared success. As the premier global provider of trusted technology intelligence, IDC equips business and technology leaders with the evidence they need to make confident decisions. Our insights inform strategy, investment, and innovation across industries and regions.

Recognized by IAR as Analyst Firm of the Year for five consecutive years, IDC sets the standard for credibility and impact. With more than 1,000 analysts worldwide and a truly global perspective, we combine deep expertise with practical relevance. Here, your ideas matter, your voice is heard, and your contributions provide the insights leaders rely on every day. It is meaningful work, backed by a culture that supports growth, collaboration, and long-term career development with a globally respected brand.

What We Offer

- **A complete benefit package:** 25 days of holidays, 4 sick days, meal allowance, leisure benefit allowance & annually reviewed company-wide closures on 19 August (Unplug Day) and 24 December – 1 January inclusive (Global Shutdown) and a volunteering day.
- **Individualized Culture:** An environment where you can explore new areas outside your specialty and stay engaged with work you enjoy.
- **Hybrid Working:** Hybrid working with some days in office per month required, a pleasant office in Prague old town near Staroměstské Namesti.

Equal Opportunity Employer

IDC is committed to providing equal employment opportunities for all qualified persons. Employment eligibility verification required. We participate in E-Verify.
