Rimini Street, Inc. (NASDAQ: RIMN), a Russell 2000® Company, is a proven, trusted global provider of end-to-end, mission-critical enterprise software support, managed services and innovative Agentic AI ERP solutions, and is the leading third-party support provider for Oracle, SAP and VMware software.

Our comprehensive portfolio of unified solutions help run, manage, support, customize, configure, connect, protect, monitor, and optimize enterprise application, database and technology software, enabling our clients to achieve better business outcomes, significantly reduce costs and reallocate resources towards strategic projects.

The Company has signed thousands of contracts with Fortune Global 100, Fortune 500, midmarket, public sector and government organizations who selected Rimini Street as their trusted, proven mission-critical enterprise software solutions provider and achieved better operational outcomes, realized billions of US dollars in savings and funded AI and other innovation investments.

We are actively seeking a QA Engineer – Agentic ERP Platform. This hybrid role is based in our Selangor or Penang office.

Position Summary

The QA Engineer is responsible for hands-on testing and quality assurance of Rimini Street's Agentic ERP Platform, ensuring that AI-driven features meet functional requirements, performance standards, and enterprise reliability expectations. This role executes test plans, builds automated test suites, and identifies defects across the platform's APIs, UI, and agent workflows.

Reporting to the QA Testing Lead, this engineer works closely with developers to validate new features, reproduce and diagnose issues, and maintain comprehensive regression coverage. The ideal candidate is detail-oriented, experienced in test automation, and comfortable working with AI-powered systems where outputs may be non-deterministic.

Essential Duties & Responsibilities

Test Execution & Automation

- Execute manual and automated test cases for platform features, including API endpoints, UI components, and agent workflows.
- Develop and maintain automated test suites using Python-based testing frameworks.
- Write and maintain integration tests that validate end-to-end platform functionality.
- Perform regression testing to ensure new changes do not degrade existing functionality.
- Validate AI agent outputs against defined accuracy thresholds and evaluation criteria established by the QA Testing Lead.

Platform-Specific Testing

- Validate tool invocations for schema compliance, idempotency, error handling, and permission gating.

Job moved to **In progress** under Clicked apply.

- Verify audit log completeness, ensuring every agent action produces a structured audit record with required fields (session, event type, agent, policy version, before/after state).

Defect Management

- Identify, document, and track defects with clear reproduction steps and severity assessments.
- Work with developers to diagnose root causes and verify fixes.
- Perform exploratory testing to uncover edge cases and unexpected behaviors.
- Participate in defect triage and prioritization sessions.

Test Infrastructure

- Maintain and improve test automation infrastructure and CI/CD test pipelines.
- Manage test data and test environment configurations across containerized deployments.
- Build and maintain test fixtures and mock services for isolated testing.
- Monitor test execution results and investigate flaky or unreliable tests.

Quality Processes

- Contribute to test plan development and test case design.
- Participate in sprint planning and estimation for QA activities.
- Document testing processes and maintain knowledge base articles.
- Support release validation and sign-off activities.

Experience

- 3+ years of QA engineering experience, with hands-on test automation.
- Experience testing REST APIs and web applications.
- Familiarity with agile development processes and CI/CD workflows.
- Experience with at least one test automation framework (Pytest, Selenium, Playwright, or similar).
- Exposure to AI/ML system testing or non-deterministic output validation is a plus.
- Enterprise software or B2B platform experience preferred.

Required

Technical Skills

- Python for test scripting and automation.
- Test automation frameworks: Pytest, Selenium, or Playwright.
- API testing: Postman, REST Assured, or equivalent.
- API contract testing and schema validation (Pact or equivalent).
- Docker and containerized test environments.
- SQL fundamentals for test data validation (PostgreSQL preferred).
- Git version control and pull request workflows.

Job moved to **In progress** under Clicked apply.

Preferred

- Experience testing Angular web applications (Angular 14+).
- Familiarity with performance testing tools (JMeter, Locust, k6).
- Observability tool literacy: OpenTelemetry traces, Jaeger, LangFuse, or Grafana for distributed trace inspection.
- Evaluation framework familiarity: LLM-as-judge, Promptfoo, DeepEval, or equivalent for AI output regression testing.
- Understanding of durable execution testing patterns (workflow replay, idempotency verification).
- Exposure to testing AI/ML outputs: evaluation metrics, statistical validation.

Skills & Competencies

- Detail-oriented; able to design thorough test cases that cover edge cases and boundary conditions.
- Analytical mindset; can diagnose complex issues across multiple system components.
- Collaborative; works effectively with developers, QA leads, and cross-functional teams.
- Proactive; identifies testing gaps and suggests improvements to processes and coverage.
- Clear communicator; writes precise bug reports and test documentation.
- Self-motivated and effective in a remote environment.
- Fluent in English (written and verbal).

Desired Qualifications

- Bachelor's degree in Computer Science, Software Engineering, or related field.
- ISTQB Foundation or similar QA certification.
- Experience in enterprise software companies or B2B SaaS platforms.
- Contributions to open-source testing tools or frameworks.

Location & Travel

Location: Hybrid - Selangor or Penang office.

Travel: Minimal; occasional travel for team meetings or training

Language: Fluent English required (written and verbal)

Why Rimini Street?
